Caron Business Solutions is awarded for the development work on RVSpyViewer

Caron Business Solutions is recognized for their RVSpyViewer Utility developed using Microsoft technology.

Vancouver, British Columbia, June 2006 – Caron Business Solutions Inc, a Burnaby based development firm and provider of integrated business information systems, announced today it has been awarded the Microsoft Competency Award. Caron Business Solutions is being acknowledged for their development of the RVSpyViewer utility.

This award recognizes Caron Business Solutions' commitment, expertise and superiority using Microsoft products in developing RVSpyViewer. RVSpyViewer takes error logs produced by RVSpy in Sage Accpac ERP and puts the data into a tree format. This then allows error messages to be highlighted and bookmarked for easy reference.

"RVSpyViewer helps us be even more time efficient and accurate in locating errors in data when assisting our customers. It also facilitates learning the logic behind the Sage Accpac data which is invaluable when building custom applications and tools", said Fan Chun, Director of Services for Caron Business Solutions.

Caron Business Solutions' development team used Microsoft Visual Studio.Net 2005 to create this utility. "RVSpyViewer will make our Sage Accpac consultants more time efficient which translates into savings for our customers ," added Mr Chun.
